Special Issue

IBERIA QUESADA

J. Brendan Murphy, R. Damian Nance, Stephen T. Johnston

For contents see p. iv
Editors-in-Chief
P. AGARD Université Pierre et Marie Curie, Sorbonne Universités, Paris, France
J.P. AVOUAC California Institute of Technology, California, USA
R. CARBONELL Consejo Superior de Investigaciones Científicas (CSIC), Barcelona, Spain
R. GOVERS Utrecht University, Utrecht, Netherlands
K. WANG Geological Survey of Canada, Canada

Honorary Editors: T. Engelder, S. Uyeda, F. Wenzel

Scope of the journal
The prime focus of Tectonophysics will remain on high-impact original research and reviews in the fields of kinematics, structure, composition, and dynamics of the solid Earth at all scales. Tectonophysics particularly encourages submission of papers based on the integration of a multitude of geophysical, geological, geochemical, geodynamic, and geotectonic methods.

Tectonophysics welcomes contributions of three types:
- Regular Papers
- Fast track papers for short, innovative rapid communication, which will usually be reviewed within three weeks after submission
- Comprehensive review articles which provide an overview of significant subjects

Publication information
Tectonophysics (ISSN 0040–1951). For 2016, volumes 666–693 are scheduled for publication. Subscription prices are available upon request from the publisher or from the Elsevier Customer Service Department nearest you or from this journal’s website (http://www.elsevier.com/locate/tecto). Further information is available on this journal and other Elsevier products through Elsevier’s website (http://www.elsevier.com). Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by standard mail (surface within Europe, air delivery outside Europe). Priority rates are available upon request. Claims for missing issues should be made within six months of the date of dispatch.

The paper used in this publication meets the requirements of ANSI/NISO Z39.48-1992 (Permanence of Paper)
PRINTED IN THE NETHERLANDS
Special Issue

Iberia Quesada

Guest Editors

J. Brendan Murphy, R. Damian Nance and Stephen T. Johnston

CONTENTS

Tectonic evolution of the Iberian margin of Gondwana and of correlative regions: A celebration of the career of Cecilio Quesada

J.B. Murphy, R.D. Nance and S.T. Johnston ................................................................. 1

The last stages of the Avalonian–Cadomian arc in NW Iberian Massif: isotopic and igneous record for a long-lived peri-Gondwanan magmatic arc

P. Andonaegui, R. Arenas, R. Albert, S. Sánchez Martínez, R. Díez Fernández and A. Gerdes .................................................. 6

Geochemistry of the Ediacaran–Early Cambrian transition in Central Iberia: Tectonic setting and isotopic sources

J.M. Fuenlabrada, A.P. Pieren, R. Díez Fernández, S. Sánchez Martínez and R. Arenas ..................................................... 15

Radiometric discrimination of pre-Variscan amphibolites in the Ediacaran Serie Negra (Ossa-Morena Zone, SW Iberia)

Upper Ovetian trilobites from Spain and their implications for the palaeobiogeography and correlation of the Cambrian Stage 3 in Gondwana

E. Liñán, J.A. Gálvez Vintaned, G.L. Pillola and R. Gozálo ........................................ 46

Age and characteristics of the Loma del Aire unit (SW Iberia): Implications for the regional correlation of the Ossa-Morena Zone

T. Sánchez-García, C. Quesada, F. Bellido, G.R. Dunning, Ch. Pin, E. Moreno-Eiris and A. Perejón ........................................... 58

Tectonic setting of the North Gondwana margin during the Early Ordovician: A comparison of the Ollo de Sapo and Famatina magmatic events

K. Del Greco, S.T. Johnston and J. Shaw ................................................................. 73

Was there a super-eruption on the Gondwanan coast 477 Ma ago?

Tracing the Cambro-Ordovician ferrosilicic to calc-alkaline magmatic association in Iberia by in situ U–Pb SHRIMP zircon geochronology (Gredos massif, Spanish Central System batholith)

J. Díaz-Alvarado, C. Fernández, M. Chichorro, A. Castro and M.F. Pereira ................................................................. 95

Late Ordovician (post-Sardic) rifting branches in the North Gondwanan Montagne Noire and Mouthoumet massifs of southern France

J. Javier Álvaro, J. Colmenar, E. Moncreet, A. Pouclet and D. Vizcaíno ................................................................. 111

Detrital zircons from the Ordovician rocks of the Pyrenees: Geochronological constraints and provenance

Thickening vs. extension in the Variscan belt: P–T modelling in the Central Iberian autochthon

F.J. Rubio Pascual, A. López-Carmona and R. Arenas ....................................................... 144

U/Pb age of a large dacitic block locked in an Early Carboniferous synorogenic mélange in the Parautochthon of NW Iberia: New insights on the structure/sedimentation Variscan interplay

E. González Clavijo, I.F. Dias da Silva, G. Gutiérrez-Alonso and A. Díez Montes ................................................................. 159

A review of the arcuate structures in the Iberian Variscides; constraints and genetic models

R. Dias, A. Ribeiro, J. Romão, C. Coke and N. Moreira ................................................... 170

New kinematic constraints on the Cantabrian orocline: A paleomagnetic study from the Peñalba and Truchas synclines, NW Spain

doi:10.1016/S0040-1951(16)30204-9
